- Model and drawing are always consistent
- Free configurable Shop Drawings

# ELEMENTPLAN

Ideal synthesis of Shop Drawing and 3D Modeling

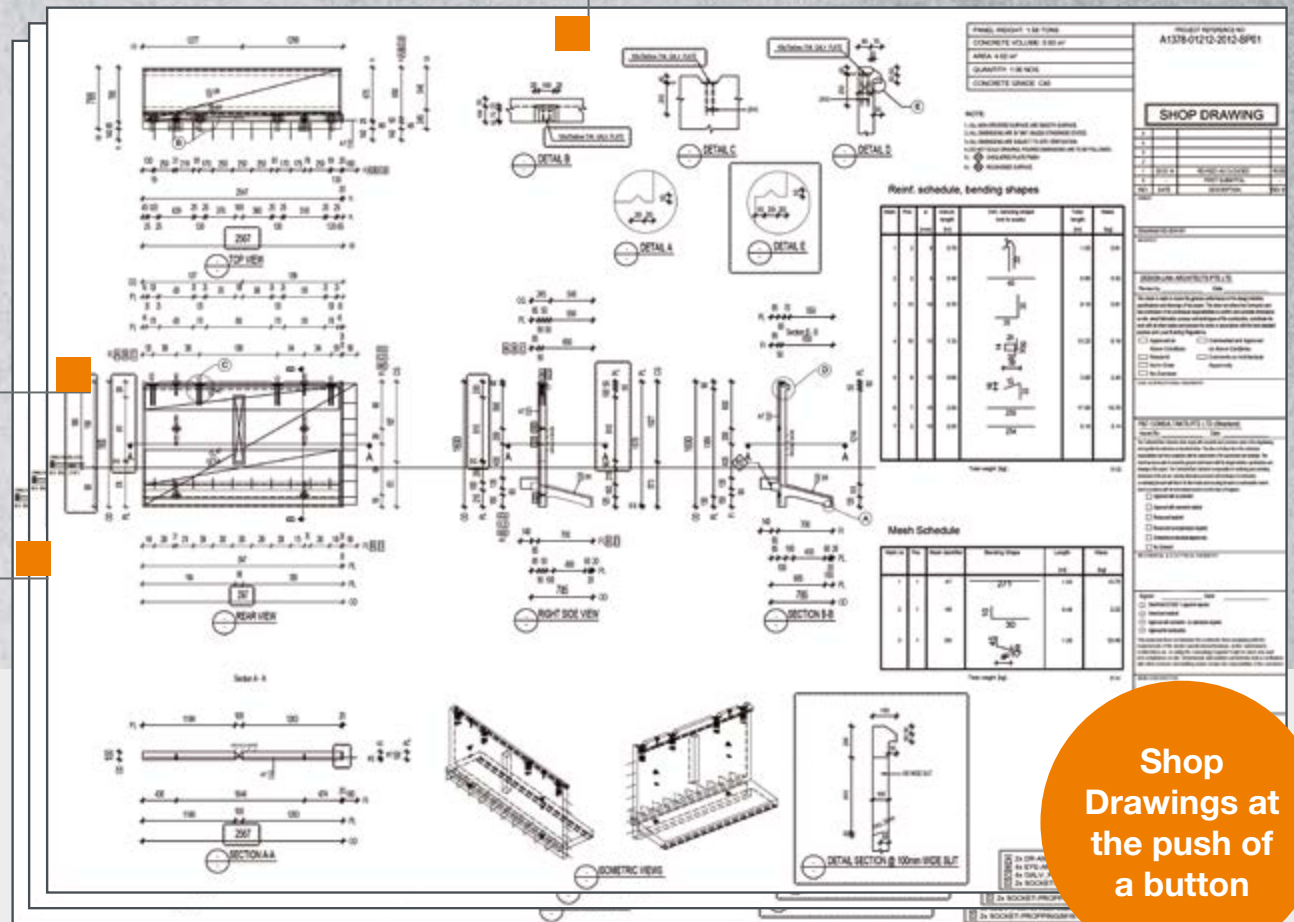

Layouts can be individually created, depending on customer and element type.

Multi-page Shop Drawings serve to display your specific content.

PLANBAR offers an ideal and unique synthesis of model- and drawing- oriented work. Because the Elementplan module solves the task of automatically creating production documents from a model with geometry, reinforcement, fixtures and a lot more. This means that you can work on the drawing in 2D and that the 3D model is automatically adjusted in the background, whereby PLANBAR naturally ensures that the model and drawing remain consistent. After all, production documents are still of great importance, this is why our customers appreciate our time-tested software solution.

Changes in the model are directly transferred to the production documents.

Header and stamp are always up to date.
